

1. Lost & Found Registry

Abstract

People lose phones, bikes, laptops, and bags every day.
When someone finds them, it is difficult to know who the real owner is.

This project helps people safely prove ownership of their items.

The system creates a QR code or NFC tag.
If the item is lost, the finder scans the code and contacts the real owner safely.

Blockchain keeps ownership records secure and prevents fraud.

Goal

Make lost items easy to return safely and honestly.

2. Transparent Charity Donations Tracker

Abstract

Many people donate money but do not know where it goes.
Sometimes money is wasted or used incorrectly.

This project helps donors track their donations clearly.

Every donation is recorded on the blockchain.
This creates trust between donors and charities.

Goal

Help people donate with confidence and honesty.

3. Split Bill Calculator

Abstract

Friends often argue about who paid for food, travel, or shopping.

This project helps groups split bills fairly and easily.

The smart contract calculates how much each person owes.
It sends reminders until everyone pays.

Blockchain keeps payment records clear and transparent.

Goal

Make sharing expenses simple and stress-free.

4. Vaccination Record Wallet

Abstract

Paper vaccine cards can get lost or damaged.
People may also need proof for travel, school, or work.

This project stores vaccine records safely on the blockchain.

Clinics issue digital vaccine certificates to users.
The records can be checked quickly anywhere in the world.

Blockchain protects records from being changed or copied illegally.

Goal

Keep health records safe, simple, and easy to verify.

5. Car Maintenance Log

Abstract

People often forget car service dates or lose repair records.

This project stores vehicle maintenance history on the blockchain.

Every service is recorded, including:

- oil changes
- repairs
- part replacements

- service dates

Owners receive reminders for future maintenance.

Buyers can also check the true service history before purchasing a used vehicle.

Goal

Make vehicle maintenance records safe, trusted, and easy to track.
